CRANES & COMPONENTS

WE PRESENT **THE LATEST HOIST** THAT WE HAVE LAUNCHED IN OCTOBER 2021: **THE GHE17**

THE ENTIRE RANGE OFFERS A CENTRIFUGAL BRAKE AS OPTIONAL

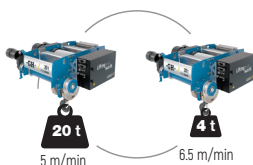

Designed and manufactured based on the concept of modularity used in our new generation hoists, the **GHE17** incorporates all the characteristics that have made this family of hoists synonymous with robustness, performance and reliability.

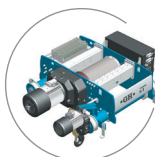

NEW DESIGN OF GEAR MOTOR

Satisfies the highest market demands. Work group M5 or higher throughout the range. Hardened and ground gears for greater durability and smooth operation.

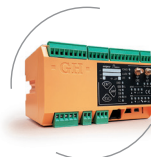

WITH VARIABLE FREQUENCY DRIVE AND OVERSPEED OF 30%

New lifting motor, which together with the variable frequency drive provides greater productivity and at the same time lengthens the life of the mechanism. The lower the load, the higher the speed.

TUBULAR DOUBLE GIRDER

Greater hook travel and new 2,100 mm trolley span. We offer a competitive solution that is unique in the market.

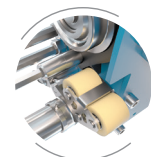

SMART HOIST

Combination of the new **GHE17** and our **COREBOX**: connected intelligence system to save costs and increase productivity.

AUXILIARY SAFETY BRAKE

Cost-effective solution and available in the entire range. The centrifugal brake progressively stops the load in the event of a runaway.

REDUCED HEIGHT UP TO 20 t

Balanced and compact solutions that avoid the use of counterweights thanks to the tension roller, reducing reactions in the structure.
